The illustration heading this page shows how pies and cakes are removed. As the tin is taken from the oven it is allowed to rest upon a tumbler or some other utensil, the pie or cake remaining upon the removable bottom, while the rim falls to the table.

These tins do away with the cutting and greasing of papers for the bottoms.

Canvassers will find them well adapted to their trade.

We have Obtained the Sole Right to Manufacture this Article.

IRON-JACKET OIL CANS.

(Patented January 15, 1878.)

1	/ 2	8	5	10 gallons.
\$4.40	6.60	8.20	11.00	17.00 dozen.

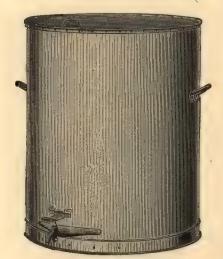

The iron jackets are stronger than wood and far more serviceable. They neither shrink nor swell, and do not split nor fall apart.

These cans are made from tin plates. A sheet-iron casing with wood bottom protects them from bruising.

Note.—Every can is tested by steam and guaranteed to be tight.

	1	2	8	5	10	gallons.
Crates contain	12	12	12	6		cans.

200			. 50.00

The "Queen City" Oil Tank is first quality in all respects.
The "Emerald" is made of the same material, but lighter weight.
These tanks are made with wood underneath the metal bottom. The pump is movable, and can be used in pumping oil from barrels to the tank. The Drip Pan is a clean and safe receptacle for measures and funnels. A cover over all prevents the accumulation of dirt, evaporation and unpleasant odor of oil, and danger of fire. The tank can be locked if desired.

BRIGHT COKE TIN PLATES.

| 14x20, IC. | Box. | B

PONTYMISTER "OLD STYLE" TERNES.

112 Sheets in Box.

	Box.		Box
14x20, IC		20x28, IC	
14x20, IX		20x28, IX	
ATANUS ALL:		words to the second sec	

Each sheet BRANDED, not stamped to its injury.

GUARANTEED.

WE NOW GUARANTEE:-

That every box branded as above is made of the best quality of Charcoal Iron, or of best Soft Steel.

That there is a minimum coating of 20 lbs. of metal to each box of 14x20 IC, 112 sheets, and 40 lbs. to each box of 20x28 IC, 112 sheets.

That each box is carefully assorted and contains no waster sheets.

These Plates are the heaviest coated ever yet sent into the market.

They are inot passed through any Patent Rolls or Grease-pot, but allowed to absorb all the metal that is possible to put on, hence the difference between them and any other Old Style Plates.

There are more Pontymister "Old Style" Ternes made than all the other Old Style Plates put together, which is pretty conclusive that customers find them to be the best Plates now made, but in consequence of unscrupulous imputations made by certain dealers, we have decided to Guarantee Every Box of the

PONTYMISTER "OLD STYLE" TERNES.

"BUTTLES" FIRE POTS.

For Charcoal.

OLIVER'S SHEAR AND ROD CUTTER.

The distinctive features of this tool are its compactness, power and capacity. Its compactness is readily seen. Its power is obtained from an eccentric, on which a hardened collar rolls against a hardened block—thus lessening the friction. Its capacity for cutting sheet metal is that of any length or width, and 3-16 inch in thickness; for the wire rod, to 5-16 inch in diameter.

It has two gauges—one on the table for angles, the other on the graduated bar for lengths.

For the general use of all metal workers, this tool is offered with the fullest confidence of meeting their requirements.

AUSTIN'S CONDUCTOR FASTENINGS.

	cet.
Don Wood	en ny
For wood.	
T7 T1 ! !	07
FOR BRICK.	

Special attention is called to this Fastenine, as the BEST method of attaching Conductors to the walls of buildings, to prevent dampness. The process of using this fastening is described as follows: The Section No. 1 is soldered to the conductor. The Shank No. 2 is driven in the wall with the outer end inserted into the Socket of No. 1; then, by dropping the Pin No. 3 into the hole, which is in the centre of Nos. 1 and 2 when attached, the Conductor is firmly secured, and no joint can become detached without first removing the Pin.

OIL STOVE OVENS.

For American Oil Stoves.

WICK RAISER.

The wick raiser used in the American Oil Stoves is constructed on an entirely new plan. The receptacle is flush with the sides of the wick tube, allowing the raiser to come full to the edge of the wick. They are made of two longitudinal and transversely ground spindles, each of one solid piece, without solder, and so geared together that the crests of one spindle come opposite the troughs of the other, allowing a free passage of oil, while each engage the wick at twenty-six different points.

The raisers in common use consists of two to six little saws, soldered on a wire spindle,

and engage the wick on one side only, at as many points as there are saws, and are dependent on solder to keep them in place. Another raiser which claims merit has rollers on each side which grip the wick at periods of about one inch at opposite points, and is a doubtful improvement, if not worse, than the saw teeth. Neither of the above two raisers come within half an inch of the edge, thus leaving the parts of the wick which most need support, entirely unsupported.

Sheet Iron Grate included in all sizes except Nos. 1 and 2.

In roasting meats, turkey, etc., in any stove or range, much attention has to be given to basting and turning, and at least one-fourth of the weight and the richest flavor is lost by evaporation and passing off of steam; but by using this Baker this loss is all avoided.

This Baker is constructed strictly on scientific principles, has been thoroughly tested by the best chemists and practical men and women of the country.

ACME STOVE PIPE.

PATENTED.

NESTED AND CRATED.

MADE FROM No. 27 SMOOTH COLD ROLLED IRON.

PACKED IN CRATES OF TWENTY-FIVE JOINTS.

To put together, rest pipe on something; lock the seams in the usual way; place one hand on each end, with right hand thumb against seam, just below the crimp, to prevent its coming apart; squeeze pipe in with left hand until the notches pass each other, as shown in cut; then slip the bottom one over the top and allow the seams to come together again, thus making a complete groove-seamed pipe. No rivets; no malleting of seams necessary. Every joint ready for use when package is opened; cannot collapse or come apart, and can be put together instantly.

BELL'S PATENT ROOFING EDGERS.

For Standing Lock Tin Roofing.

Patented Sept. 7, 1880. Common Gauge (1 and 11 inches).\$30.00

Wide Gauge (14 and 14 inches)...... 30.00

1. Every roof of one-twelfth pitch and upward should have the Standing Lock, as they can expand and contract without

as they can expand and contract without affecting the seam.

2. The Edger does the work uniformly, turning both edges of the metal strip at once, which prevents it from running out of a straight line.

3. The flanged Rollers give GRADUAL form to the metal, consequently the tin does not crack at the cross seams as it often does when tongs are used.

often does when tongs are used.

4. Bell's Edger will work on any and every desired pitch, as the machine while being operated is in a stationary position at the upper part of the roof, while the metal is being turned through and between flanged rollers. But the machine is light and easily moved from one part of the roof to another.

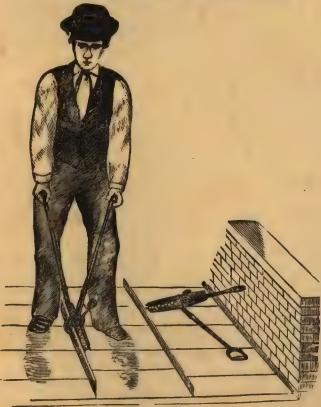

and easily moved from one part of the roof to another.

5. The guides at the entrance way are adjustable, and so direct the metal strips to the required gauge that any boy can operate the machine, equally as well as a skilled workman.

6. The work is completed by one passage through the machine, while a workman with tongs is required to go four times over the metal strip, and the Edger will do it in one quarter the time.

7. A great saving of time. Bell's Improved Roofing Edger does the work with great rapidity, and at the same time the work is made easy, and one man or boy will do the work, while with common tongs two men are required.
